Ashok K. Saluja, Ph.D.
Director, Sylvester Comprehensive Cancer Center
Pancreatic Cancer Research Institute (SPCRI) at the Miller School of Medicine

Invites you to the

**Pancreatic Scientific Symposium and Luncheon**

Pancreatic cancer is the third most frequent cause of cancer-related deaths in the United States, and is predicted to become the second most prevalent by 2020. Lack of early detection and resistance to therapy are the major reasons this disease is extremely difficult to treat.

To change the course of this trend, it is imperative that the scientific community collaborate to generate novel ideas and promote pioneering research in pancreatic cancer. The Sylvester Comprehensive Cancer Center Pancreatic Cancer Research Institute endeavors to unite scientific intellect and resources to generate significant advances through innovative research strategies.

As we launch the Institute, join us for a symposium with leading scientists who will take us a step closer to conquering the disease.

**Thursday, June 16, 2016**
**12:30 – 4:30 p.m.**

Sylvester Support Services Building
1430 NW 11th Avenue
